

## L3 Hyperview

With Pierluigi Taddei, I developed the Java+OpenGL powered viewer technology behind L3 HyperView. L3 HyperView is an userfriendly viewer for gigapixel-class images with smooth pan, zoom, rotation and innovative input interfaces.

Leonardo3 HyperView premiered on 12-20 May 2007 at Biblioteca Reale, Torino during the "Codex on flight" exposition, where very high resolution images were displayed on Full High-Definition HDTV screens.

Learn more at [L3 homepage](#) and the [exposition page](#) (includes photos, press release and video of national TV coverage by RAI3 TG3 Leonardo).
